Qatar is located on a peninsula jutting 100 miles north into the Persian Gulf from Saudi Arabia. It is an oil producing country that has experienced rapid economic growth over the last few years and is currently the highest per-capita income country. One of the challenges of designing a restaurant in Qatar is the region's extreme climate. In our design we account for temperatures of up to 107°F and humidity between 70 and 80 percent. These conditions are problematic for a single HVAC system. We designed the building with two systems: one to remove the humidity, and one to maintain a comfortable temperature

Who We Are

EPG is a full service (MEP) engineering consulting firm for design, operation, and construction management of your projects. We take pride in our efficiency and accessibility to our clients. Our management team has more than 45 years combined experience working with customers like you.
